

Playing videos and creating a splash video

Submitted by Joshua Caldwell on Wed, 2018-08-29 14:22

It is possible to play videos on CrossControl displays. The method for playing videos will differ slightly from display to display.

- For VC/VA/XA/XS: There is an application called 'gplay' available through the Linux command line.

Using the applications described above it is also possible to use a short video as a "splash video" when the display boots up instead of using a static image. The attachment below will install a CrossControl splash video as well as the supporting scripts and files. To install and change the splash video to a custom video of your choice, please follow the README file in the attached zip.

	Attachment	Size
 <small>Package icon type unknown</small>	Splash_Video_Example (VC/VA/XS/XA) [1]	3.08 MB
